***Allowable Subject Matter***

Claims 1-3 and 6-20 are allowed.

As to claim 1, examiner notes the BPAI Decision dated March 29, 2012. Quoting from p. 4-5 of the decision, "Quintana does not select the final pixel color from a first and second color as claim 1 required. The Quintana reference cycles through a progression of colors until desired pixel color is determined. See Quintana, Figure 1. Figure 1 discloses a method (100) in whether an output pixel for a color component of an image pixel should be output (102). It is clear from Quintana's disclosed method that the exclusivity of the pixel color selection recited in claim 1 is not taught by Quintana."

Quintana at fig. 1 shows a progression through multiple color components of the same image pixel. Quintana chooses whether a color need be output for a color component, then cycles back and does the same determination for multiple other components *of the same pixel* (examiner notes that 3 or 4 components is standard in the art). Quintana is effectively selecting between a 1 and a 0 value for a color component 3-4 times per pixel, which means that Quintana is actually selecting between, at a minimum, 8 color values for a final pixel color. As explained by the BPAI, this cycling through color components does not fit under the broadest reasonable definition of "selecting one of the first color and the second color as a final pixel color" because Quintana does not disclose the exclusivity of the pixel color selection of claim 1. To anticipate the claim, Quintana would have to select between a first color and a second color rather than selecting between a first color, second color, third color, fourth color, fifth color, etc.

As to claim 12, examiner again refers to the BPAI Decision dated March 29, 2012. Quoting from p. 5 of the decision, "The arguments Appellant set forth in regards to the 'final pixel color' and 'selecting between a first color and second color for a final pixel color' is not commensurate with the scope of claims 12 and 20 because neither claim requires the exclusivity of claim 1." However, claims 12 and 20 have now been amended to recite "an adjustment module *to select between a first color and a second color* for the current pixel by modifying the low resolution color signal". Examiner notes that the "low resolution color signal" is then output in both claims 12 and 20, making it similar to the "final pixel color" of claim 1. While claims 12 and 20 are not identical to claim 1, they do now recite the exclusivity in final pixel color selection that is not taught in Quintana.

The following is an examiner's statement of reasons for allowance: The prior art does not disclose "selecting one of the first color and the second color as a final pixel color, wherein the first color is selected in the event that the accumulated error is less than a threshold, wherein the second color is selected in the event that the accumulated error exceeds the threshold" in conjunction with the other limitations of claim 1. Independent claims 12 and 20 recite similar limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to AARON M. RICHER whose telephone number is (571)272-7790. The examiner can normally be reached on weekdays from 8:30AM-5:00PM.
